

Art. No: **HP10509**

 Safety net made from nylon 2x10m (no toeboard). Primarely used on scaffolds.

 The safety net complies with EN 1263-1-System U with netsize 100mm.

 The net can easily be fastened with the help of sewn-on straps. If necessary, loose straps can also be used as a complement HSS Art.Nr. HP10519.

 Weight: 10kg

 Available in multiple colors, blue is standard

 User instructions follows.

HSS Strapp - HP10519

- 1.** All four sides of the net must be fastened to the scaffold with the sewn straps. Often it is easiest to start with the top side as it will be easier to collect any net surplus on the bottom.
- 2.** Continue the same procedure the entire length of the network. Collect any surplus with the straps. Make sure that the white border of the net is also included.
- 3.** Multiple nets can be spliced either to the same part of the scaffold or only two nets if needed to attach them to the scaffold using the net straps if no suitable part of the scaffold are available nearby.
- 4.** Check the net assembly for slips and supplement with loose straps if necessary.
