

Art. No: **Various**

The flexible sitestair.

Use our loose steps/buildingsteps for a very easy and rational way of building your stairs in desired heights. Offering both fixed angle of 42° and the flexible variant the possibilities are endless.

Ofcourse slippery proff and galvanized.

 Easy to assemble, only the first step needs to be leveled / measured, the remaining is "clamped" quickly together with the previous step.

 Non-slip construction of expanded sheet metal with large penetration of snow and dirt.

 All our steps are renovable.

 Hot dip galvanized.

 All our steps with fixed console are stackable.

Art. No: **HP103, HP104, HP105**

Build your own flexible stair in the angles between 15 och 50°

-  Choose your own height and angle for the stairs.
-  Use good quality for your wooden siderails, we recommend size 45x200mm impregnated.
-  Start with your lowest step and keep mounting your way up by clamping the next on top of the others console to reach the top.
-  Use high quality screw when building your flexible stair, we recommend atleast size 6x75mm

Use high quality screw when building your flexible stair, we recommend atleast size 6x75mm

-  HP106 Post for our loose steps/building steps, an easy and qick way to build a firm and steady hand-rail for your flexible sitestair. We recommend one post every 150cm.
